CAUTION

1. DETECTOR TUBE CONTAINS REAGENTS. 2. DO NOT TOUCH THESE REAGENTS DIRECTLY ONCE TUBES ARE BROKEN. 3. KEEP THE TUBES OUT OF THE REACH OF CHILDREN.

NOTICE

- 1. USE ONLY WITH PUMP MODELS AP-20, AP-20S, 400B, AP-1, AP-1S OR 400A. OTHERWISE, CONSIDERABLE ERROR IN INDICATION MAY OCCUR.
- 2. BEFORE TESTING, CHECK THE ASPIRATING PUMP FOR LEAKS (REFER TO ITEM 9. INSPECTION OF ASPIRATING PUMP). ANY PUMPS SHOWING SIGNS OF LEAKAGE SHOULD BE CORRECTED BEFORE USE.
- 3. DO NOT USE THIS TUBE OUTSIDE THE STATED OPERATING TEMPERATURE RANGE.
- 4. STORE TUBES IN A COOL AND DARK PLACE (0-25 °C/32-77°F), AND USE BEFORE EXPIRATION DATE PRINTED ON TOP OF THE BOX.
- 5. PRIOR TO USE, READ CAREFULLY ITEM 10. USER RESPONSIBILITY.
- 6. READ THE CONCENTRATION IMMEDIATELY AFTER MEASUREMENT.

2. SAMPLING AND MEASUREMENT:

① Break both ends of detector tube.

CAUTION SAFETY GLASSES AND GLOVES SHOULD BE WORN TO PREVENT INJURY FROM SPLINTERING GLASS.

2 Insert the detector tube into aspirating pump securely as shown in Fig.1. (Arrow mark shall point to the pump.)

3. CORRECTION FOR AMBIENT CONDITIONS:

- ① Temperature; No correction is necessary
- 2 Humidity; No correction is necessary.
- ③ Atmospheric Pressure;

True Concentration = Tube reading \times

1013 Atmospheric pressure (in hPa)

4. INTERFERENCE:

Amines produce a similar stain and will give higher readings.

5. CHEMICAL REACTION IN THE DETECTOR TUBE: $2NH_3+H_3PO_4 \rightarrow (NH_4)_2HPO_4$

6. DISPOSAL OF TUBE:

USED TUBES SHOULD BE DISPOSED CAREFULLY ACCORDING TO RELEVANT **REGULATIONS, IF ANY.**

7. THRESHOLD LIMIT VALUE (T.L.V.) OF EACH GAS:

9. INSPECTION OF ASPIRATING PUMP:

- ① Insert sealed, unbroken detector tube into the pump.
- ② Align the guide marks on the shaft and stopper of the pump.
- ③ Pull the handle to full stroke and wait for 1 minute.
- ④ Unlock the handle and allow it to return slowly into the pump by holding the cylinder and handle securely

CAUTION HANDLE WILL TEND TO SNAP BACK INTO THE PUMP QUICKLY.

(5) If the handle returns completely to the original position, the performance is satisfactory. Otherwise, refer to maintenance procedure in the instruction manual of the pump to correct the leakage.

10. USER RESPONSIBILITY:

It is the sole responsibility of the user of this equipment to ensure that the equipment is operated, maintained, and repaired in strict accordance with these instructions and the instructions provided with each Model AP-20, AP-20S, 400B, AP-1, AP-1S or 400A aspirating pump, and that detector tubes are not used which are either beyond their expiration date or have a colour change different to that stated in the Performance specifications.

Checking for leaks:

- ③ Align the guide marks on the shaft and stopper of the aspirating pump.
- ④ Pull the pump handle at full stroke locked position and wait for 1 minute or until the completion of sampling is confirmed with the flow indicator of the pump (See descriptions about the flow indicator in the instruction manual of the pump).
- \bigcirc On completion of sampling, read the scale at the maximum point of the stained layer.
- (6) When concentrations are below the scale range, multiple pump strokes can be used to determine these lower concentrations.

Use 2 or 5 pump strokes, then following formula is available for true concentration.

True concentration = Tube reading \times 1 Number of pump strokes

SPECIAL NOTE: I. The scale is calibrated at 20 °C (68°F), 50 %R.H. and 1013hPa. Readings obtained in other circumstances should be corrected (REFER TO ITEM 3. CORRECTION FOR AMBIENT CONDITIONS).

II. When the maximum point of the stained layer is unclear or obliquely, read the scale at the centre between the longest and shortest points.
